Experience

Senior Game Designer: Grab Games **September 2023 - Present**

- Design gameplay systems, progression mechanics, and player-facing content for an upcoming family party game being built in Unreal 5.7
- Responsible for the design and balance of 40+ gameplay events and abilities, creating encounters that encourage meaningful player choice and strategic decision-making
- Collaborate with engineers to architect a scalable AI opponent system featuring distinct playstyles, adaptive behaviors, and tunable difficulty parameters
- Design progression and reward content that guides players toward engaging activities while maintaining pacing, motivation, and player agency
- Prototype UI/UX for gameplay systems in Figma, using interactive mockups to explore player flows and refine feature designs before implementation
- Author detailed design documentation and implementation specifications to communicate design intent across design, engineering, UX, and production
- Run user playtest sessions and analyze player feedback and playtest data, translating insights into measurable gameplay improvements

Game Designer: Embodied Inc **June 2020 – August 2023**

- Designed and implemented educational missions and gameplay experiences for Moxie, an AI-powered companion robot recognized as one of Time Magazine's Best Inventions of 2020
- Collaborated with child development experts and therapists to translate educational goals into cohesive and entertaining gameplay experiences
- Responsible for the design of several thematic mission arcs containing up to nine interconnected missions with branching narrative paths driven by player interaction
- Designed replayable educational activities following product launch to encourage continued engagement and expand the product's live content library
- Created design documentation, interaction flows, and prototypes to communicate content structure and implementation requirements
- Implemented content using proprietary visual scripting tools and Python
- Contributed to transmedia storytelling and worldbuilding initiatives that expanded the Moxie IP beyond the core gameplay experience

Skills

Game Design: Mission/Quest Design · Narrative Design · Writing · Worldbuilding · Design Documentation
Technical Stack: Unreal · Unity · Godot · Visual Scripting/Blueprints · C#/C++ · Python · JavaScript · Git
Collaboration: Figma · Jira · Confluence · Google Workspace · Microsoft Office Suite

Education

University of Southern California **August 2015 - December 2019**

BA: Narrative Studies
Minor: Video Game Design and Management
